## GUIDE FOR TEMPERATURE SAFETY

### Handling Guidelines

Maintain cold foods at or below 41°F. Maintain hot foods at or above 135°F.

Potentially hazardous hot food should be cooled rapidly. 135°F cooled to 70°F within 2 hours. 70°F cooled to 41°F within 4 hours. Using shallow pans with a product depth of no greater than 2 inches, the food should be placed in a refrigerator uncovered or loosely covered during the cooling process.

Never defrost food at room temperature. Use a refrigerator, continuously running cold water, a microwave or cook from frozen state. Frozen food that has been thawed should be cooked or otherwise processed before it may be refrozen.

Cook foods to the proper internal temperature. Use a metal probe thermometer to ensure food is cooked properly.

Wash your hands thoroughly with hot soapy water (before and after handling food) for a minimum of 20 seconds.

Avoid handling food when: ill, have a skin infection, or have cuts on the hands.

Never cross contaminate from raw to cooked products.

Wash, rinse and sanitize cutting boards and knives between every use.

Reheat leftovers to 165°F internal temperature or higher, stirring constantly to cook evenly or microwave to 195°F. Never reheat leftovers more than once.

Keep kitchens, dining areas and storage rooms free from insects and rodents. Store chemicals away from food.
